

Quality Policy

Barge Master constantly strives for a higher execution level in the field of QHSE, based on the standards that apply in the industry and branches. Our priority is and remains the well-being of our employees and subcontractors by creating a high-quality, healthy, safe and ecofriendly work environment. Each employee is timely informed, instructed and trained as needed in order to execute his/her tasks.

All subcontractors' activities are professionally coordinated and the employees are fully integrated in our project organization. The quality of the internal processes and of our management system is systematically evaluated and stored, and continuously reviewed in function of improvement.

Understanding our client's needs is the starting point for everything we do. We maintain relationships by working closely with clients and deliver on their requirements while executing projects profitably. We strive to achieve results safely, on time and within budget, thereby meeting or exceeding client and regulatory requirements.

We believe that our people make the difference and we recognise the immense strength of teamwork. We trust each other and promote open, constructive debate and feedback. Unless confidential, information is shared transparently, both internally and externally.
